

HealthLandscape is a suite of data visualization tools that helps you find insights to improve health care.

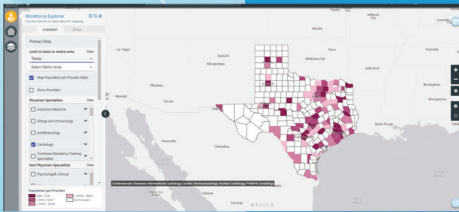

Blue Raster collaborates with HealthLandscape to provide custom development and GIS services for the system of tools such as:

Community Data Portal

Promoting collective action through shared outcomes

Complex community problems require collective action with shared vision, goals, and well-defined, actionable outcomes. Communities that share metrics are able to work toward a common agenda and make data-driven decisions.

Workforce Explorer

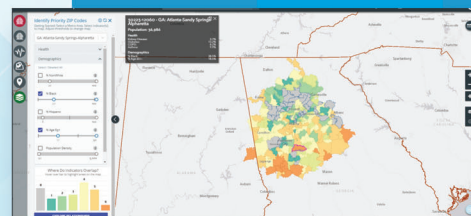

Visualize the geographic distribution of your workforce

Your region is facing a critical shortage of primary healthcare providers. How do you attract talented healthcare professionals to your region?

Local Area Needs Assessment

Identifying areas for targeted approaches

Improving population health requires identifying high-risk areas based on social determinants of health (“cold spots”) and poor health outcomes (“hot spots”). Identifying and mapping these high-risk areas allows for targeted approaches.
