

## Blue Raster integrates ArcGIS mapping tools with dynamic websites powered by Drupal

As a leader in the integration of Drupal with ArcGIS, Blue Raster has the expertise to create a turn-key web platform to showcase your geospatial intelligence. Our team has worked with Drupal for years, using this versatile, open source content management system to build interactive websites for our global clients.

## SERVICES

Cloud GIS | Open Data | Web Maps | Mobile Strategy | Interactive Mapping Tools

## SKILLS

### Rich Internet Applications

ArcGIS Online, HTML5, JavaScript, Adobe ColdFusion, Flex, Flash

### Mapping/GIS Development

ArcGIS Server/Desktop, Cartography, Geoprocessing (Python, ArcObjects), Data Collection/Compilation, Map Production, Installation/Support

### Mobile Development

iOS, Android, PhoneGap, HTML5

### Climate Adaptation Knowledge Exchange (CAKE) CAKEX.org

A joint project of Island Press and EcoAdapt, CAKE is an online platform developed in Drupal by Blue Raster to facilitate the sharing of information about on-the-ground climate change adaptation projects. The website features a custom mapping application that is directly connected to a Drupal database, designed and built by Blue Raster. Researchers can use the mapping tools to access case studies, library holdings, and other documents related to climate change and adaptation projects in specific regions, and contribute new resources through the community forum.

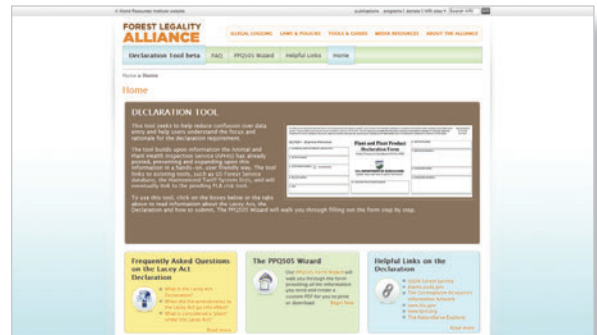

### Southern Forests for the Future seesouthernforests.org

Blue Raster developed this innovative tool to help the World Resources Institute map the health of the southern forests of the United States, which face threats from suburban sprawl, coal mining and resource extraction. Developed in Drupal, this content-rich website supports WRI's initiatives of increasing public awareness about these threats and developing economic incentives that encourage forest preservation. The site combines ArcGIS mapping tools with photos, video and case studies managed in Drupal to reveal trends and changes in southern forests.

### Forest Legality Alliance forestlegality.org

The Forest Legality Alliance (FLA) turned to Blue Raster to build a Drupal site to manage documents and media related to the FLA's efforts to protect the world's forests and biodiversity by reducing illegal logging. The interactive map tool allows users to explore current information on global policies and laws related to the harvesting and trade of timber and forest products. An extensive media library of historical maps, photos and YouTube videos provides FLA stakeholders with resources that help them promote better forest governance.

### Forest Legality Declaration Tool forestlegality.org/tools-guides

To combat trafficking in illegal wildlife and plants, the U.S. Department of Agriculture requires importers of wood products to complete a Lacey Act Declaration (PPQ505 Form). Blue Raster worked with the Forest Legality Alliance to create a new Declaration Tool to help importers understand the rationale for the Declaration and accurately complete this complex form. Using Drupal, Blue Raster developed this wizard that walks importers through the process of filling out the form, providing step-by-step instructions, FAQs, and reference materials.
